Cooking
Skateboarding
Photography

EDUCATION

Candidate for B.S. in Computer Science at Northeastern University Boston, MA

Khoury College of Computer Sciences, Artificial Intelligence Concentration
September 2019 – Present (Expected May 2023)

Honors: 3.72 GPA, Dean's List (Fall '19, Spring '20)

Coursework: Fundamentals of Software Engineering, Machine Learning and Data Mining I, Algorithms, Object-Oriented Design, Intro to Data Science, Mathematics of Data Models, Discrete Structures

EXPERIENCE

Software Engineering Co-op at Wayfair Boston, MA

January 2021 – August 2021

Followed DevOps practices to maintain and improve CI/CD platform for thousands of engineers. Completed and created tasks and goals with teammates using the Scrum/Agile framework. Developed communication workflows and a ChatOps bot to automate deploy troubleshooting. Created an internal decoupled web service to uncover hidden toil in troubleshooting requests.

Teaching Assistant at Northeastern University Boston, MA

September 2020 – Present (Fall Semesters Only)

Organized office hours to reinforce and review key discrete math concepts for dozens of students a week.
Graded a score of problem sets and exams on a weekly basis.

WordPress Development Intern at TestFirst Lawn Care Jackson, TN

January 2019 – August 2019

Developed back-end functionality for a WordPress site that allowed dozens of users to comprehensively view soil tests results to better understand what products they needed for their lawn. Wrote code in PHP, HTML, and MySQL while communicating with a front-end developer on what features needed to be implemented on the site.

PROJECTS

Minimalist Portfolio Site

September 2021 – Present

Static HTML, JavaScript, and CSS site hosted using Github's portfolio feature. Juxtaposed minimalist design principles with modern web design elements and features.

Spotify Song Genre Prediction with Machine Learning

May 2020 – July 2020

Collaborated with a partner to train and test various classification algorithms to classify various Spotify songs as one of six pre-selected genres.
Built using the Scikit-learn and Pandas libraries in a Jupyter Notebook environment.

ExCELLence Animator

May 2020 – July 2020

Collaborated with a partner to create software that allowed users to view, edit, and export animations of geometric shapes.
Built using the Java Swing GUI library and MVC design principles.
